

# SJR Restoration Flow Impacts to OCID

**1** Pre-SJR Restoration - OCID had about a 12.5% chance of receiving less than its full Contract Supply of 39,200 acre feet.  
 Post-SJR Restoration - The same hydrology (12.5% chance) will result in a water supply reduction of 10,000 acre feet – a 25% impact.

**2** Post-SJR Restoration – Under Restoration Flows there is a 20% chance that OCID will not receive its full Contract Supply of 39,200acre feet
